

## Version overview

Version 1 focuses on core features as well as implementing some new add-ons to the old app. This version will deliver easy navigation through the app, a button to adjust accessibility settings for colorblind, core functionality for the new search feature, and core functionality for transferring money. It will also deliver one almost complete and new feature, that feature lets users make spending plans.

Version 2 focuses on additional features. This version adds a feature for the user to see their spending overview, adds different color pallets for colorblind users, makes transactions easier, as well as offers financial tips for the user to view and follow. This version delivers exciting new features that add to the experience of the app.

Version 3 includes even further additions to the app's functionality and features. In version 3, updates are made based on user feedback as well as further and more complex updates on additional features. Version 3 includes functionality to make the app colorful, show account balance during transferring, a reward system, as well as some additional features for spending overview, financial goals, and the login process. Feedback from assignment week 2 was connected to our user stories, so the feedback was added under the user story it was connected to.

For version 3, we will be improving the following:

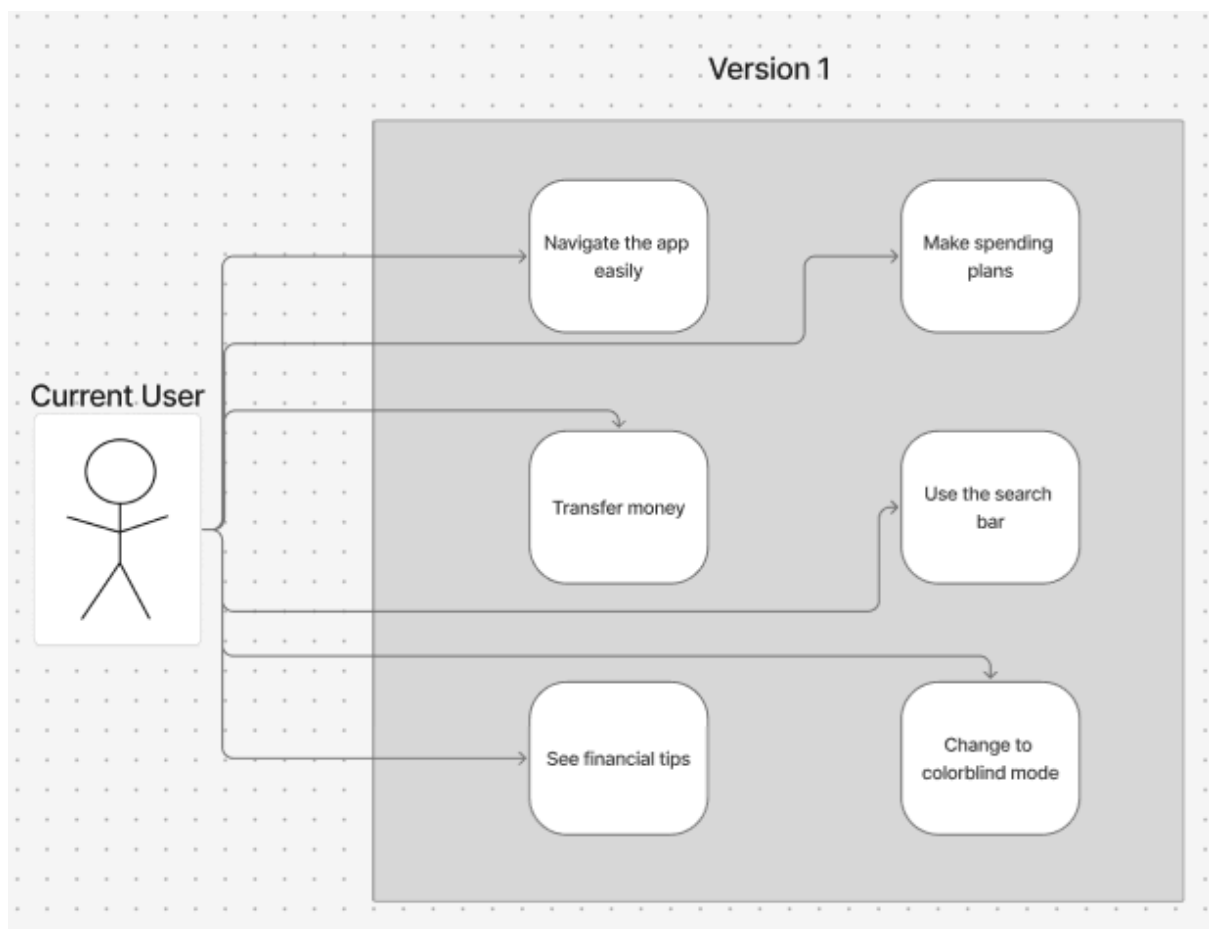

- Working help button on login page, under user story: As a current user, I want to have the UI well laid out, so that it's easier to navigate
- Currency specification when transferring money, under user story: As a current user I want to see my balance while transferring so that I don't have to remember it during the process.
- Log out feature, under user story: As a current user, I want to have the UI well laid out, so that it's easier to navigate
- Further specification on page titles, under user story: As a current user I want to have the UI well laid out, so that it's easier to navigate
- Add more detailed information on how to make financial goals, under user story: As a current user I want to make a plan for my spendings so that I make better financial decisions.

# Use case diagram

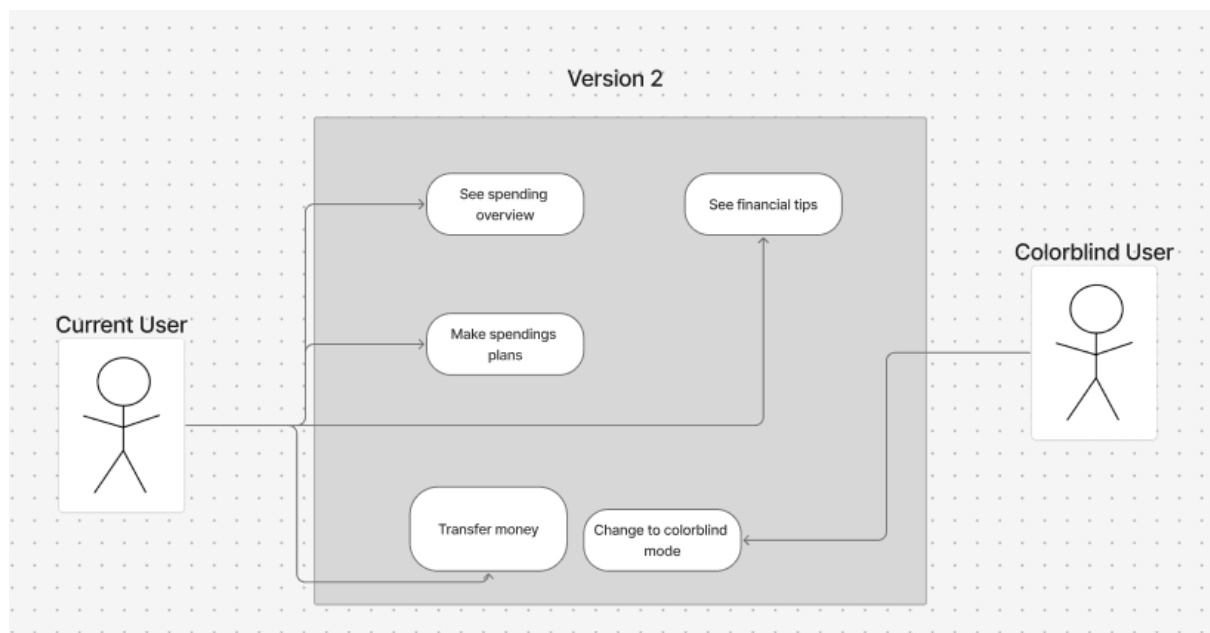

## Use cases

1. Use the search bar
2. See spending overview
3. See financial tips
4. Transfer money
5. Make spending plans
6. Better reward system
7. Navigate the app easily
8. Change color palette
9. Change to colorblind mode
10. Display balance during transfer

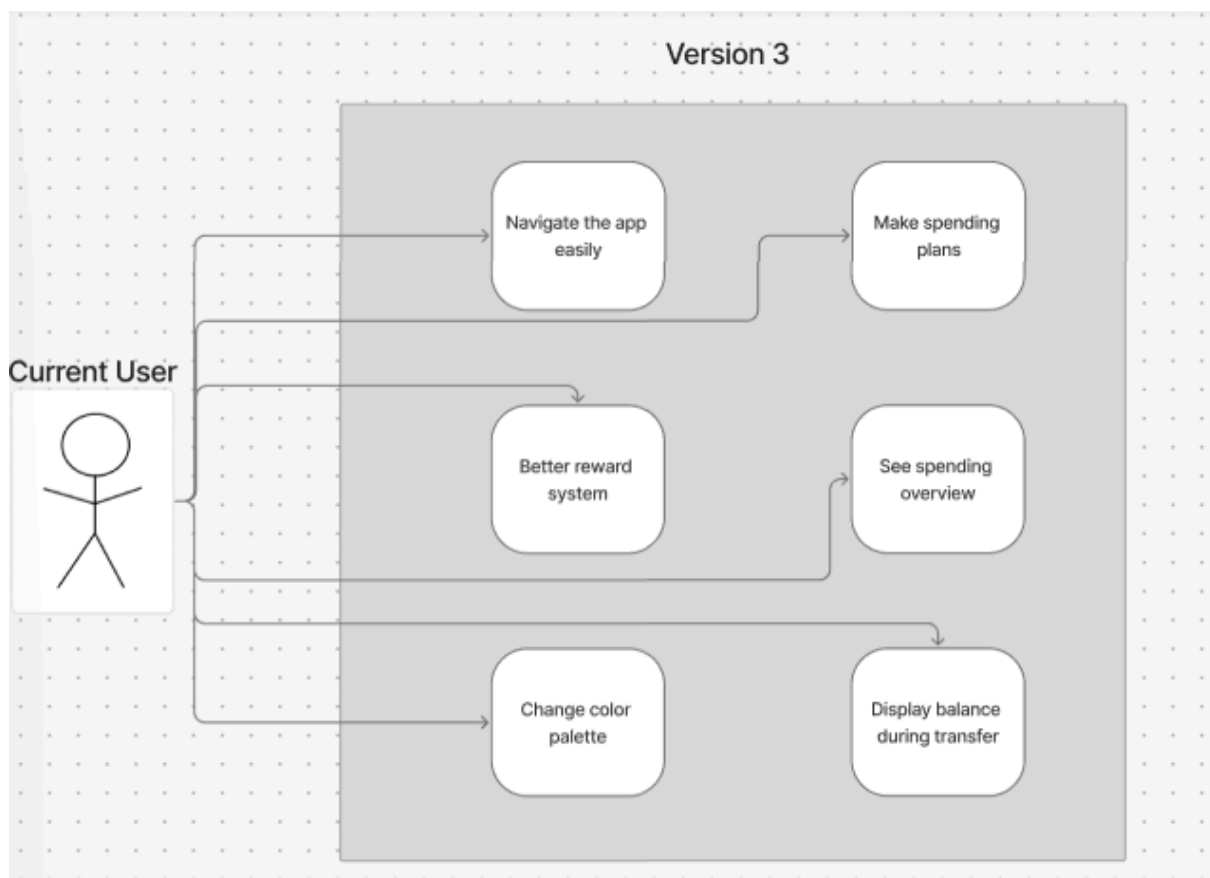

## Version 1

## Version 2

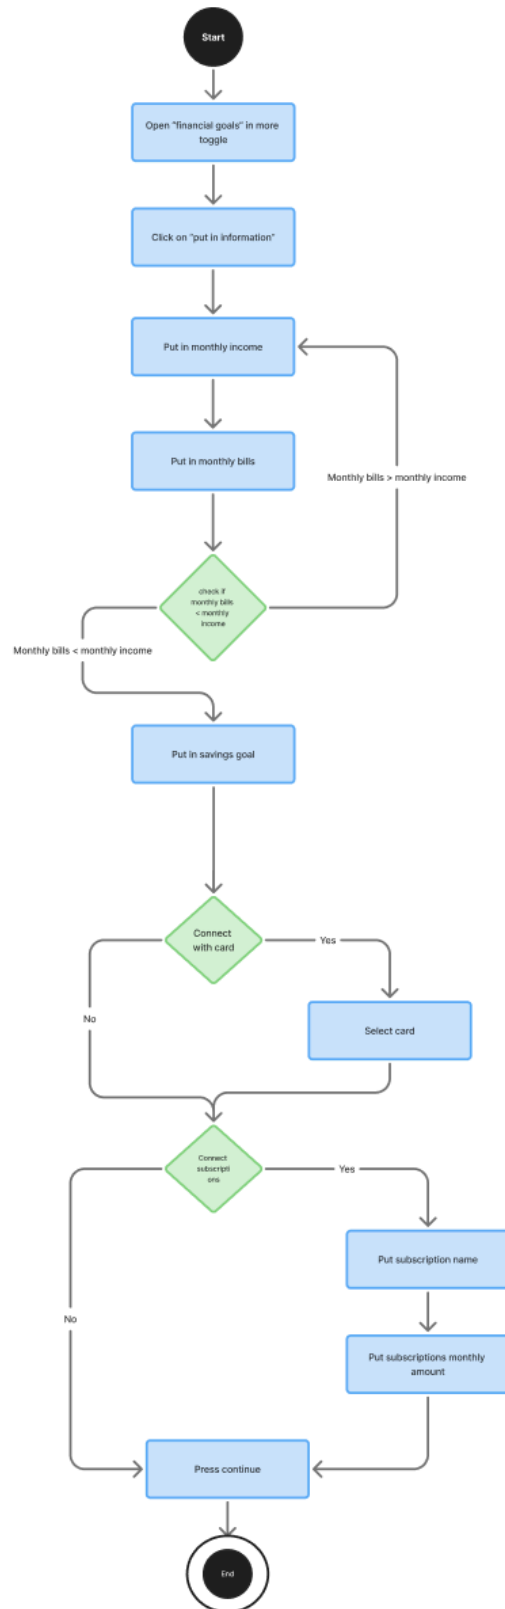

## Version 3

# Activity diagram

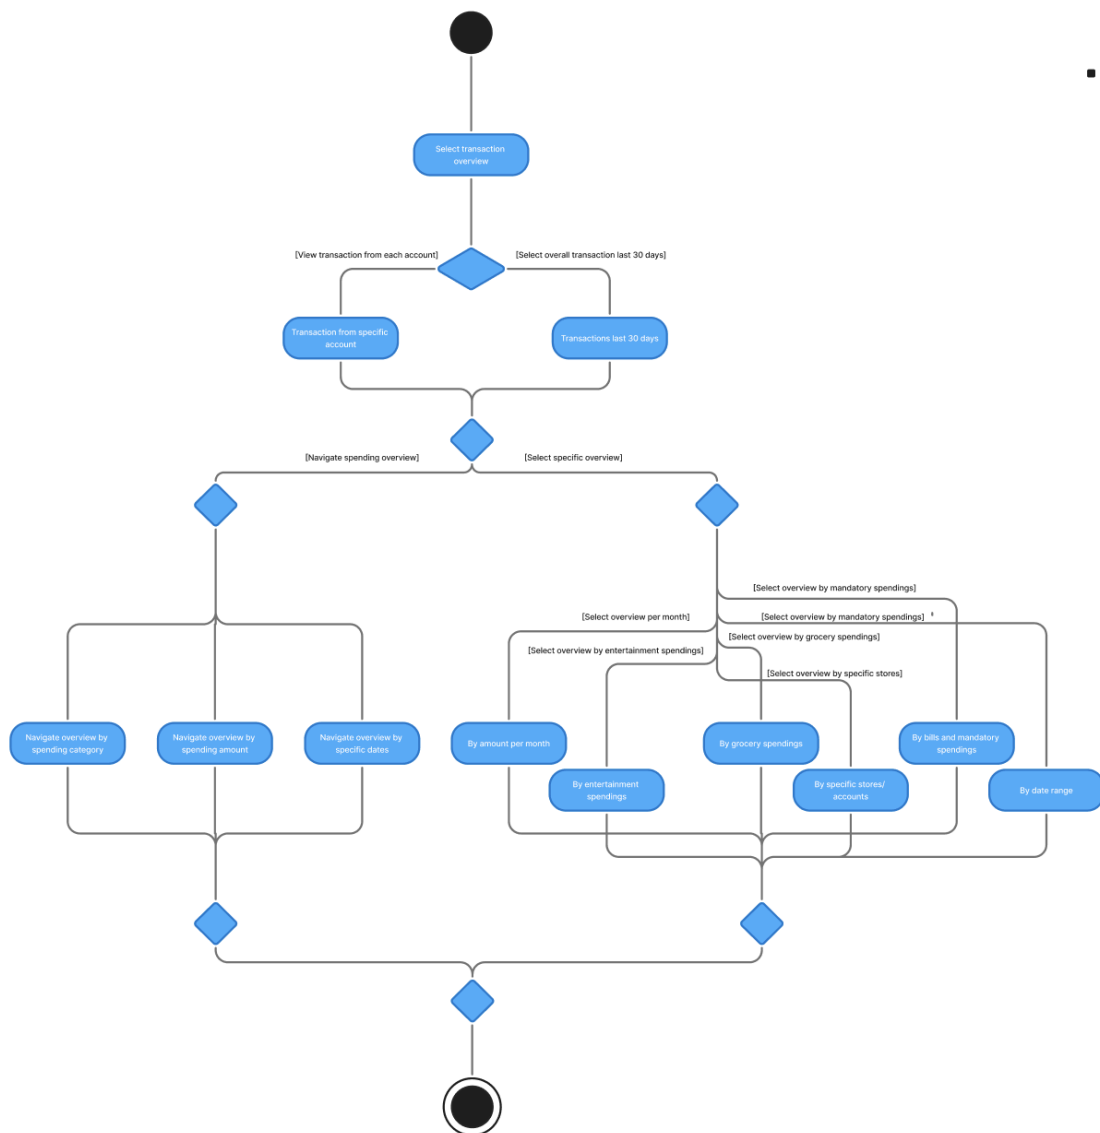

Version 1

- Make spending plans

## Version 2

- See spending overview

### Version 3

- Display balance during transfer
